### HISTORY OF THE BOTANICAL GARDEN

Kaunas Botanical Garden was established in 1923 at Lithuanian University (later it was renamed after Vytautas Magnus) as the centre of botanical sciences. Former manor of famous nobleman Juozapas Godlevskis in Aukštoji Freda near Kaunas was chosen as a place for the Garden. Creation of the manor began at the end of the 17th century. The surrounding park was landscaped to adjust the ponds to the form of J and G letters. With only slight changes they have remained still.

Presently, Kaunas Botanical Garden of VMU occupies the area of 62.5 hectares. Approximately 10864 different plants comprise the collections and expositions.

### SECTORS OF PLANT COLLECTIONS AND DISPLAYS

#### **Sector of Medicinal, Aromatic Plants and Spices**

At the present time there are 786 cultivated examples of medicinal plants, aromatic plants and spices and 49 examples of *Humulus lupulus*. Collections are planted according to bioactive plant compounds classification. 26 species belong to the category of protected and rare plants.

#### **Sector of Dendrology**

There are 1367 cultivated examples in this sector. In 2011 extraordinary B. Galdikas oak grove was planted. It is comprised of 50 genetic clones of 31 famous Lithuanian oaks – nature monuments. Park of the Botanical Garden consists of two parts – the old manor park and arboretum. In the old landscape style park plants grow with no clear system. In the arboretum, founded in 1923, the plants are planted and grown in a systematic order according to genera and families.

#### **Sector of Pomology**

Collection contains 444 examples.

#### **Sector of Floriculture**

This sector is the biggest in Botanical Garden. There are 7784 cultivated examples:

**Greenhouse** contains 1600 examples (130 families, 400 genus, 1063 species and 103 cultivars). The plants are located according to the geographical and climatic principle. The most interesting of them are cycads, banana, pineapple, coffee-tree, bamboo, date-palm, monkey-puzzle, olive-tree, bo-tree, gum-tree, and many more. Expositions in greenhouse are renewed every four months.

There are 716 cultivated examples (14 species and 676 cultivars) of roses.

There are 547 examples of *Dahlia* (485 cultivars), 462 examples of annual flowers, 85 examples of *Iris*, 1395 examples of monocotyledon plants, 670 examples of *Paeoniaceae*, *Polemoniaceae* and *Saxifragaceae* families plants. Other perennial flowers collection contains 2146 examples and new plants collection of climatic zone 7 contains 163 examples.

**Flora systematics** collection-exposition at the present time contains 421 examples (36 families, 223 genus, 387 species and 71 cultivars). Collection-exposition was reconstructed in 2014.

**Energetic plants** collection-exposition contains 66 examples.

**Herbarium** contains about 10000 examples.

### **Sector of Plant Pathology**

Scientists of the sector investigate pathological condition of introduced plants in Lithuania.

### **GEOGRAPHICAL SITUATION:**

Latitude	54 <sup>0</sup> 52'
Longitude	23 <sup>0</sup> 54'
Elevation (Altitude)	84 m

### **In collectionibus seminum partem habuerunt /seed exchange staff:**

Ž. Baškienė, L. Buknienė, I. Lukšytė, R. Maršalienė, E. Misiukevičius, O. Ragažinskienė, K. Stankevičienė, J. Šabūnaitė, E. Šeinauskienė

All seeds are collected from open-pollinated plants grown in the Botanical Garden, hence hybridization is not impossible in collected seeds and have a reduced germination capacity.

## **Agreement on the supply of living plant material<sup>1</sup> for non commercial purposes leaving the International Plant Exchange Network (IPEN).**

Against the background of the provisions and decisions of the Convention on Biological Diversity of 1992 (CBD) and in particular those on access to genetic resources and benefit-sharing, the Botanic Garden and Botanical Museum Berlin Dahlem is dedicated to promoting the conservation, sustainable use, and research of biological diversity. The garden therefore expects its partners in acquiring, maintaining, and transferring plant material to always act in accordance with the CBD and the Convention on the International Trade in Endangered Species (CITES). The responsibility for legal handling of the plant material passes on to the recipient upon receipt of the material. The requested plant material will be supplied to the recipient only on the following conditions:

1. Based on this agreement, the plant material is supplied only for non-commercial use such as scientific study and educational purposes as well as environmental protection. Should the recipient at a later date intend a commercial use or a transfer for commercial use, the country of origin's prior informed consent (PIC) must be obtained in writing before the material is used or transferred. The recipient is responsible for ensuring an equitable sharing of benefits.
2. On receiving the plant material, the recipient endeavours to document the received plant material, its origin (country of origin, first receiving garden, "donor" of the plant material, year of collection) as well as the acquisition and transfer conditions in a comprehensible manner.
3. In the event that scientific publications are produced based on the supplied plant material, the recipient is obliged to indicate the origin of the material (the supplying garden and if known the country of origin) and to send these publications to the garden and to the country of origin without request.
4. On request, the garden will forward relevant information on the transfer of the plant material to the body charged with implementing the CBD.
5. The recipient may transfer the received plant material to third parties only under these terms and conditions and must document the transfer in a suitable manner.

<sup>1</sup>According to the CBD "genetic resources" means genetic material of actual or potential value. This definition covers both living and not living material. The Code of Conduct and the IPEN covers only the exchange of living plant material (living plants or parts of plants, diaspores) thus falling in the definition of genetic resources.

## DESIDERATA

Please fill in order number

We are part of IPEN (International Plant Exchange Network) and can exchange material with other IPEN-members without bilateral agreements.

Non IPEN-members must return the "Agreement on the supply of living plant material for non commercial purposes leaving the International Plant Exchange Network (IPEN version 2b)" which must be signed by authorized staff. This Agreement can be returned by mail or Fax (see address above).

**Without a signed agreement seeds will not be shipped.**
